

A STEVEN HILL DEMONSTRATION WORKSHOP

FUNCTIONAL PORCELAIN ATMOSPHERIC EFFECTS FOR ELECTRIC FIRING

What makes a pot functional? How can pottery transcend mere function while still honoring its intended use?

In this two-day workshop, Steven Hill will throw and alter pots and work with slip, all the while communicating his enthusiasm for functional stoneware, spraying glazes and single firing. Steven considers form the most important single aspect

of his pottery, paying particular attention to rims, feet, lids, spouts and handles.

Discussions will cover philosophy, design, technique and making a living in clay.
